

React Toy Project Ideas

1. Beginner-Level: Core React (JSX, Props, State)

- Counter App with History – useState, list rendering, props.
- Emoji Mood Selector – conditional rendering, event handling.
- Color Picker Box – controlled components, props.
- Todo App (Mini Version) – list rendering, keys, CRUD with state.

2. Intermediate: Effects & Data Fetching

- Random Joke Generator – useEffect, fetch, async/await.
- Weather Lookup by City – controlled input + API fetch.
- Countdown Timer – useEffect cleanup, intervals, state updates.

3. Advanced State & Hooks

- Theme Switcher (Light/Dark) – Context API, useContext.
- Quiz App with Score Tracking – useReducer for complex state.
- Custom Hook – Local Storage Todo – custom hooks (localStorage).
- Expense Tracker with Chart – lifting state up, props drilling, charts.

4. Routing, Forms, and Performance

- Multi-Step Form Wizard – react-router, controlled forms.
- Mini Blog with Routing – routing, nested routes, CRUD.
- Searchable Product List – useMemo & useCallback for optimization.

5. Fun & Creative Projects

- Drag-and-Drop Kanban Board – state structure, drag libraries.
- Memory Card Game – array shuffling, derived state, effects.
- Markdown Previewer – controlled inputs, external libraries.
- Real-Time Character Counter – controlled components, derived state.

■ Suggested Learning Path

1. Counter → Todo → Color Picker → Emoji Selector
2. Joke Generator → Weather Lookup → Countdown Timer
3. Theme Switcher → Quiz App → Local Storage Todo
4. Expense Tracker → Multi-Step Form → Mini Blog
5. Memory Game → Kanban → Markdown Previewer

■ Pro Tips for Deep Learning

- ■ Refactor frequently: Convert class components to functional + hooks.
- ■ Break into components: Header, Footer, Button, etc.
- ■ Add TypeScript (optional) for type safety once you're comfortable.
- ■ Explore libraries: React Router, Zustand/Redux, React Query.
- ■ Focus on state flow: Understand "lifting state up" and data passing via props/context.
